	Get dimensions	1	
	Get attributes	2	
	Get observations	2	
	Get definition for all descriptive statistics - class code:procedure	5	
	Get the codelists	5	
	Get the codelist definition for all descriptive statistics - class code:procedure	11	
	Get definition for all variables used for descriptive statistics - class code:factor	13	
	Get the codelist definition for all variables used for descriptive statistics - class $\verb code $:factor	13	
	Get definition for descriptive statistics median	15	
	Get information for selection of data	15	
	Get information on the underlying data in D2RQ format	15	
	Get underlying data for one cube observation	18	
н	How to run this .Rmd file 67		

SPARQL scripts for the demographics cube (DC-DEMO-sample.ttl)

The examples below uses arq from Apache Jena (http://jena.apache.org). To install arq - download and unpack the latest version of apache-jena from (http://jena.apache.org/download/index.cgi). Then you need some way of invoking arq; I use a not-so-clever-approach: cd ~/bin; ln -s /opt/apache-jena-2.13.0/bin/arq.

Given a SPARQL query and RDF data, arq returns the result of the query. So this is the command line way of making a SPARQL query.

The use of arq is described many places, see for example (http://www.learningsparql.com/).

All arq commands below are to be run in the directory with the sample files, which is inst/extdata/sample-rdf directory or extdata/sample-rdf depending on the whether the development version or the installed version of the package is used.

The cd below in each code block is included because I could not find a quick way to get the code chunk executed in that directory. knitr is flexible enough to do it, I have not yet found the right way to do it. So, ignore the repeated cd ..

Get dimensions

```
cd ../extdata/sample-rdf
arq --data DC-DEMO-sample.ttl --query DEMOdimensions.rq
```

Get attributes

```
cd ../extdata/sample-rdf
arq --data DC-DEMO-sample.ttl --query DEMOattributes.rq
```

Get observations

The SPARQL script shows for each observation the dimension, attributes and measures in a row. Note: in the HTML version the output below can be scrolled using the left and right arrow.

```
cd ../extdata/sample-rdf
arq --data DC-DEMO-sample.ttl --query DEMOobservations.rq
```

```
