Get the codelist definition for all descriptive statistics - class code:procedure	. 6
Get definition for all variables used for descriptive statistics - class code:factor	. 8
Get the codelist definition for all variables used for descriptive statistics - class $\verb code $: factor	. 9
Get definition for descriptive statistics median	. 10
Get information for selection of data	. 10
Get information on the underlying data in D2RQ format	. 11
Get underlying data for one cube observation	. 13
How to run this .Rmd file	62

SPARQL scripts for the demographics cube (DC-DEMO-sample.ttl)

The examples below uses arq from Apache Jena (http://jena.apache.org). To install arq - download and unpack the latest version of apache-jena from (http://jena.apache.org/download/index.cgi). Then you need some way of invoking arq; I use a not-so-clever-approach: cd ~/bin; ln -s /opt/apache-jena-2.13.0/bin/arq.

Given a SPARQL query and RDF data, arq returns the result of the query. So this is the command line way of making a SPARQL query.

The use of arq is described many places, see for example (http://www.learningsparql.com/).

All arq commands below are to be run in the directory with the sample files, which is inst/extdata/sample-rdf directory or extdata/sample-rdf depending on the whether the development version or the installed version of the package is used.

The cd below in each code block is included because I could not find a quick way to get the code chunk executed in that directory. knitr is flexible enough to do it, I have not yet found the right way to do it. So, ignore the repeated cd ..

Get dimensions

```
cd ../extdata/sample-rdf
arq --data DC-DEMO-sample.ttl --query DEMOdimensions.rq
```

Get attributes

```
cd ../extdata/sample-rdf
arq --data DC-DEMO-sample.ttl --query DEMOattributes.rq
```

Get observations

The SPARQL script shows for each observation the dimension, attributes and measures in a row. Note: in the HTML version the output below can be scrolled using the left and right arrow.

```
cd ../extdata/sample-rdf
arq --data DC-DEMO-sample.ttl --query DEMOobservations.rq
```

```
